

Task 3 Advance Project

User Authentication System

```
<!DOCTYPE html>
<html>
<head>
  <title> User Authentication System </title>
  <style>
    /* Your CSS styles here */
  </style>
</head>
<body>
  <div class="container">
    <h2>User Authentication</h2>
    <form id="authForm">
      <label for="username">Username:</label>
      <input type="text" id="username" name="username" required><br>
      <label for="password">Password:</label>
      <input type="password" id="password" name="password" required><br>
      <input type="submit" value="Login">
    </form>
    <p id="message"></p>
  </div>

  <script>
    document.getElementById('authForm').addEventListener('submit', function(event)
    {
      event.preventDefault();
      var username = document.getElementById('username').value;
      var password = document.getElementById('password').value;

      if (username === 'admin' && password === 'password') {
        document.getElementById('message').textContent = 'Authentication successful!';
      } else {
        document.getElementById('message').textContent = 'Authentication failed.
Please try again.';
      }
    });
  </script>
```

```
</body>
</html>
```

Output:
